1	Continuous cold-water supply			
2	Space availability for installation of SWHS			
3	Availability of South facing, shadow free area for collector installation			
4	System utility should be more than 6 months.			

### Ranking Criteria for Commercial Establishments

Name of Beneficiary:				
Location:				
Contact Number:				
Contact Person:				
Sl. No.	Criteria	Details (A:10, B:5, C:1)	Rating	Remarks
1	Current Hot water system and possibility to integrate with SWHS	A: Centralized hot water system, easy to integrate with SWH systems		
		B: Decentralized hot water system (geysers) but possible to integrate with SWH		
		C: Not possible to integrate with SWH		
2	Availability of Shadow free area	A: Shadow free area		
		B: Presence of shadow but obstacles can be removed		
3	Altitude	A: Above 3000 msl		
		B: 1500-3000 msl		
		C: less than 1500msl		
4	System utility	A: Round the year		
		B: 9-12 months		
		C: 6-9 months		

5	Distance from road point	A: Within range of 500m		
		B: Within range of 2km		
		C: Within range of 5km		
7	Use of conventional hot water heating techniques	A: Fossil fuels		
		B: Fuel wood		
		C: Electricity		
8	Dedicated pumping needs for feed/cold water	A: Main water source is at higher level and no dedicated pumping is required.		
		C: Dedicated pumping will be needed to feed cold water to SWH system		
9	Availability of plumber	A: Plumber available		
		C: Plumber not available
